

MNQ Evaluation Portfolio

Eleven intraday NQ strategies from QuantLab V3 and V2 in one account, sized by fixed dollar risk on MNQ, run under Lucid Flex rules with a daily profit cap. Evidence window 2021-01-04 to 2026-08-14. Updated 24 September 2026.

Recommendation

- **Firm: Lucid Flex 50K.** The evaluation has a 50% consistency rule; the funded account has none. Lucid Pro evaluates slightly faster but its funded account almost never pays out within a month; Tradeify Select is the slowest to pass.
- **One account, the primary set of 11 strategies (S1-S11).** Opposite positions net inside one account, so there is no cross-account hedging (banned at Lucid and Tradeify).
- **Evaluation: \$300 risk per trade + close everything and stop for the day at +\$1,250.** At the 75% planning edge: pass 31%, 2.3 blown accounts per pass, median 7 trading days when it passes, about 22 trading days to a pass including restarts.
- **Steadier evaluation option: \$150 + the same cap.** Pass 48%, 1.1 blown per pass, about 49 trading days to a pass.
- **Funded: no cap, \$150 until the first payout, then \$100.** At 75% edge, 40% of funded accounts reach a first payout (median \$1,384) within a month; 31% are closed within the month.
- **Plan on 75% of the backtest edge; treat 50% as the downside.** The frozen V3 cohort kept 75% of its edge in 2023-25 and 55% in 2026.

The plan at a glance (75% edge unless stated)

	Evaluation: \$300 + \$1,250 cap	Evaluation: \$150 + cap	Funded: \$150 to first payout
Pass (evaluation) or payout (funded), at 100 / 75 / 50% edge	38% / 31% / 26%	62% / 48% / 32%	49% / 40% / 31%
Blown accounts per pass	1.6 / 2.3 / 2.8	0.6 / 1.1 / 2.2	22% / 31% / 42% of accounts blown
Median trading days when it succeeds	7	21	16
Expected trading days incl. restarts	19 / 22 / 25	38 / 49 / 71	-

Evaluation windows are 120 trading days; the funded window is 21 trading days (about a month). Unfinished runs count as not passed.

Primary set, historical account statistics

	\$300 + \$1,250 cap (evaluation)	\$100, no cap (funded)
Net profit, Jan 2021 - Aug 2026	\$133,313	\$84,226
Average per year	\$23,330	\$14,740
Max drawdown (daily)	\$10,050	\$3,158
Worst / best day	-\$3,148 / \$2,302	-\$746 / \$5,541
Positive months	74%	72%
Sharpe (daily, annualised)	1.62	2.15
Contracts per trade: median / max	2 / 12	1 / 7
Largest total MNQ open (limit 40)	40	23

Diversification: average pairwise drawdown correlation 0.05 (highest pair 0.34); average daily P&L correlation 0.18.

1. Firm rules used (50K accounts)

	Lucid Flex	Lucid Pro	Tradeify Select
Evaluation	\$3,000 target; \$2,000 end-of-day trailing drawdown; best day <= 50% of total profit	\$3,000 target; \$2,000 EOD trailing; no consistency rule; \$1,200 daily loss limit	\$3,000 target; \$2,000 EOD trailing; best day <= 40%; at least 3 trading days
Funded payout	5 days of \$150+; 50% of profit, max \$2,000, min \$500; no consistency rule	Balance \$2,100 above start + \$500 profit; best day <= 40% of cycle profit	Flex: 5 days over \$150, 50% of profit. Daily: once \$2,100 above start, up to 2x that day's profit, \$250-\$1,000
Drawdown after payout	Floor locks at start + \$100	Floor locks at start + \$100	Locks at start + \$100 once reached
Contract limit	4 minis / 40 micros	4 minis / 40 micros	4 minis / 40 micros

Sources: Lucid Trading help centre (LucidFlex payouts, consistency, evaluation pages); third-party summaries for Tradeify, whose help centre could not be read. Rules change; confirm them at purchase. Consistency-rule breaches do not fail the account, they delay the pass until more profit dilutes the largest day.

2. Method

- **Trades.** Every trade of the 25 frozen V3 strategies and the 6 V2 finalists was regenerated with the V3 engine; V3 counts match the sealed files exactly and all 3,894 V2 trades since 2021 match V2's records to the cent.
- **Sizing and costs.** Contracts = floor(risk / (stop points x \$2)), at most 12 per trade and 40 open in total (later trades are cut to fit). \$2.50 per MNQ round trip (commission and fees plus one tick of slippage per side).
- **Minute-by-minute accounting.** Every open position is marked to market at each 1-minute close. Open losses count against the trailing drawdown; the \$1,250 cap closes all positions at the first minute the day's total (closed + open) reaches it.
- **Evaluation simulation.** A new evaluation is started on every trading day from 2021 to early 2026 and run for up to 120 trading days under each firm's target, trailing drawdown and consistency rule.
- **Edge scenarios.** 100% = the backtest as it happened; 75% and 50% reduce every trade by 25% or 50% of its strategy's average trade (same swings, less profit).

How much edge to expect

Frozen V3 cohort (25 strategies)	Average trade vs. its 2019-22 level
2023-25 holdout (never seen before freezing)	75% (trade-weighted); median strategy 71%
2026 audit (Jan - Aug)	55% (trade-weighted); median strategy 86%

The chosen strategies did better than this over 2023-26, but they were chosen partly for that. V2's selection used all data through 2026, so V2 has no clean test yet. Hence 75% as the planning case and 50% as the downside.

3. Primary set: the eleven strategies

All strategies: NQ signals traded on MNQ; signal at a 1-minute bar close, market order at the next bar's open; entries 09:30-15:30 New York only; always flat by 16:00; one position per strategy.

	Strategy	Dir.	ID	Verdict 2023-25 / 2026
S1	H41 Variance-ratio trend momentum	Long & short	C91756637ca7282e7	Supported / Supported

S8	V2 30-min momentum, 1.5R trail	Long & short	C175c690afa915a44	V2: no clean test yet
S9	V2 Mean deviation (60-min SMA)	Long	C39d55eaa5412f438	V2: no clean test yet
S10	H05 Volatility-shock momentum	Long	C1a82f05b6fe1e264	Weaker Than Expected / Weaker Than Expected
S11	H50 Trend -> lunch -> afternoon continuation	Short	C87a31838e567ad3c	Supported / Inconclusive

S1 - H41 Variance-ratio trend momentum (Long & short; C91756637ca7282e7)

Entry	BUY when the 15-minute move first exceeds +1.5 volatility units while the 120-minute variance ratio VR(5) $\geq$ 1.2. SELL SHORT on the mirror image.
Stop	1 x ATR(14) of completed 15-minute bars.
Exit	No target, no trail; hold to 16:00.

S2 - H20 Extreme-move path (Long & short; Cdf2b568ee1f8a182)

Entry	BUY when the 30-minute move first exceeds +2.0 volatility units with path efficiency $\times \sqrt{n} \geq$ 2.4. SELL SHORT on the mirror image.
Stop	1.5 x ATR(14) of 15-minute bars.
Exit	No target, no trail; hold to 16:00.

S3 - H47 Overnight gap + same-direction open (15 min) (Long; Cfa444b4386db8d33)

Entry	BUY at 09:45 when the RTH open gapped $\geq$ 0.25 D above the prior RTH close and price is $\geq$ 0.05 D above the open (D = mean RTH range of the last 10 sessions).
Stop	1 x ATR(14) of 15-minute bars.
Exit	25% off at +1R, 75% runs to 16:00.

S4 - H07 Opening drive (Long; C5fbf4cc530f79d84)

Entry	BUY at 10:00 when price is $\geq$ 0.3 D above the RTH open and path efficiency since the open $\geq$ 0.4.
Stop	1 x ATR(14) of 15-minute bars.
Exit	Trailing stop 2 x ATR below the highest high; flat at 16:00.

S5 - H08 Morning trend (Long; Cf048ad80a1bd7603)

Entry	BUY at 11:00 when price is $\geq$ 0.3 D above the RTH open.
Stop	1 x ATR(14) of 15-minute bars.
Exit	25% off at +1R, 75% runs to 16:00.

S6 - H47 Overnight gap + same-direction open (5 min) (Long; C62eeef3eabed9056)

Entry	BUY at 09:35 when the RTH open gapped $\geq$ 0.25 D above the prior RTH close and price is $\geq$ 0.05 D above the open.
Stop	1 x ATR(14) of 15-minute bars.
Exit	Trailing stop 3 x ATR below the highest high; flat at 16:00.

S7 - H25 NQ/ES correlation breakdown (Short; C2845a074bb5a5501)

Entry	SELL SHORT when the 30-minute NQ/ES correlation ≤ 0.65 and NQ's 30-minute beta residual ≤ -2.0 sigma.
Stop	1 x ATR(14) of 15-minute bars.
Exit	25% off at +1R, 75% runs to 16:00.

S8 - V2 30-min momentum, 1.5R trail (Long & short; C175c690afa915a44)

Entry	BUY when the close is $\geq 1.5 \times \text{ATR}_{60} \times \sqrt{30}$ above the close 30 minutes earlier (first bar). SELL SHORT on the mirror image.
Stop	1 tick beyond the last confirmed 5-minute swing low/high.
Exit	Trailing stop 1.5R behind the best price, active after +1.5R; flat at 16:00.

S9 - V2 Mean deviation (60-min SMA) (Long; C39d55eaa5412f438)

Entry	BUY when the close is $\geq 1.0 \times \text{ATR}_{60} \times \sqrt{60}$ above the average of the previous 60 closes (first bar).
Stop	1 tick beyond the last confirmed 5-minute swing low.
Exit	No target; hold to 16:00.

S10 - H05 Volatility-shock momentum (Long; C1a82f05b6fe1e264)

Entry	BUY when the 30-minute move first exceeds +1.0 volatility unit while 15-minute realised volatility is $\geq 3x$ its time-of-day norm.
Stop	1 x ATR(14) of 15-minute bars.
Exit	Trailing stop 1.5 x ATR below the highest high; flat at 16:00.

S11 - H50 Trend -> lunch -> afternoon continuation (Short; C87a31838e567ad3c)

Entry	SELL SHORT at 13:30 when at 11:30 price is $\geq 0.4 D$ below the RTH open (efficiency ≥ 0.1).
Stop	1 x ATR(14) of 15-minute bars.
Exit	Stop to entry after +0.5R; otherwise hold to 16:00.

4. Strategy statistics (R units, 2021-01 to 2026-08, MNQ costs)

	Trades	/mo	Win %	PF	E[R]	Avg W	Avg L	t	Max DD	Lose run	PF 23+	Yrs +	Sharpe
S1	1,657	24.4	31%	1.35	+0.24	3.02	-1.00	3.8	26.1R	15	1.39	6/6	1.60

All	+307.5	+285.1	+126.0	+301.9	+169.5	+180.7	+1370.7

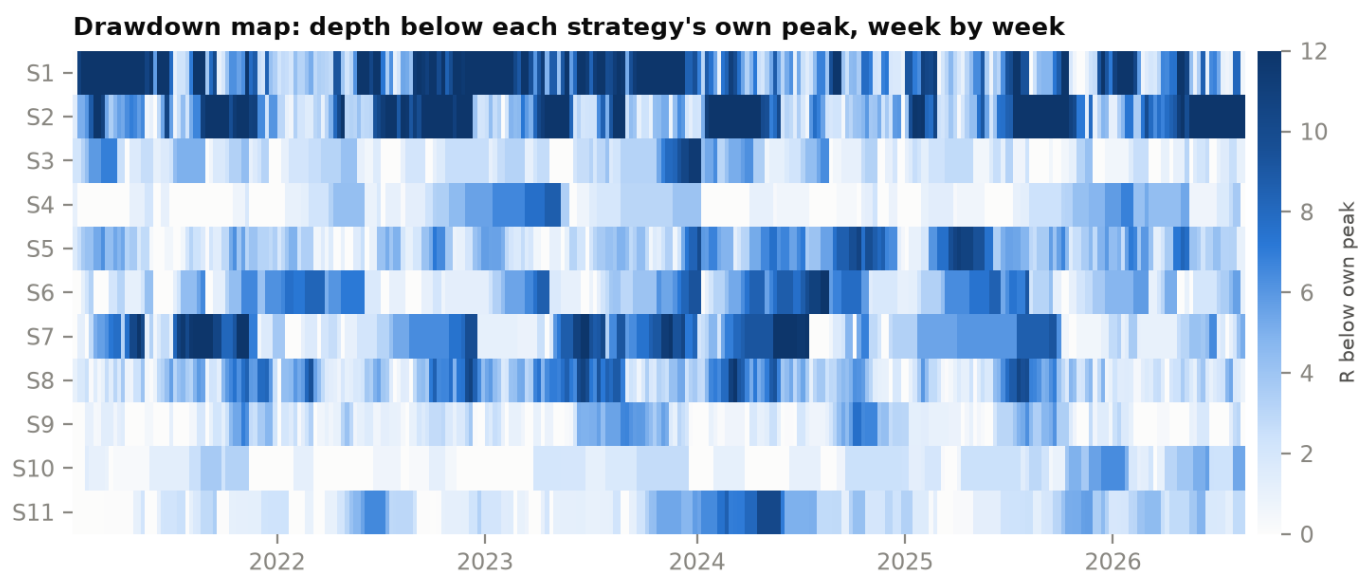

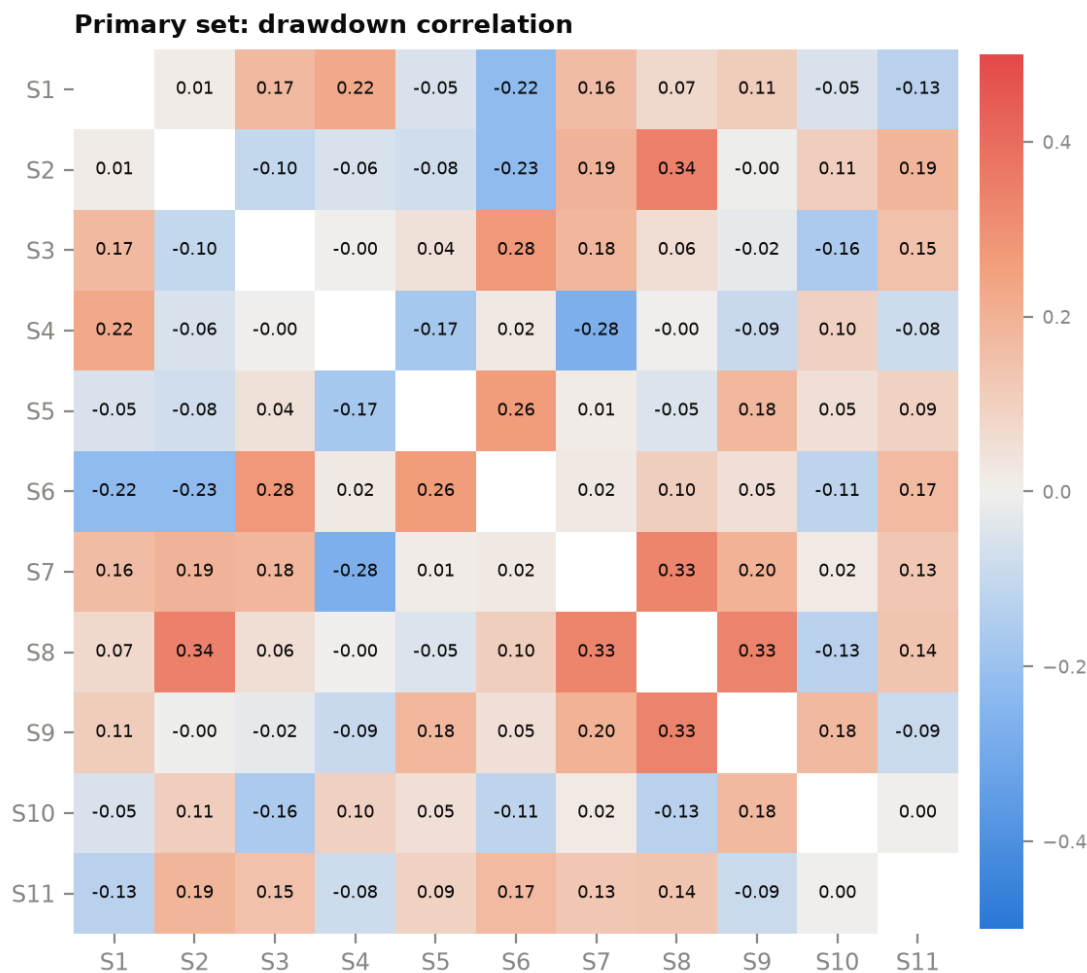

2026 covers January to mid-August.

5. Equity curves

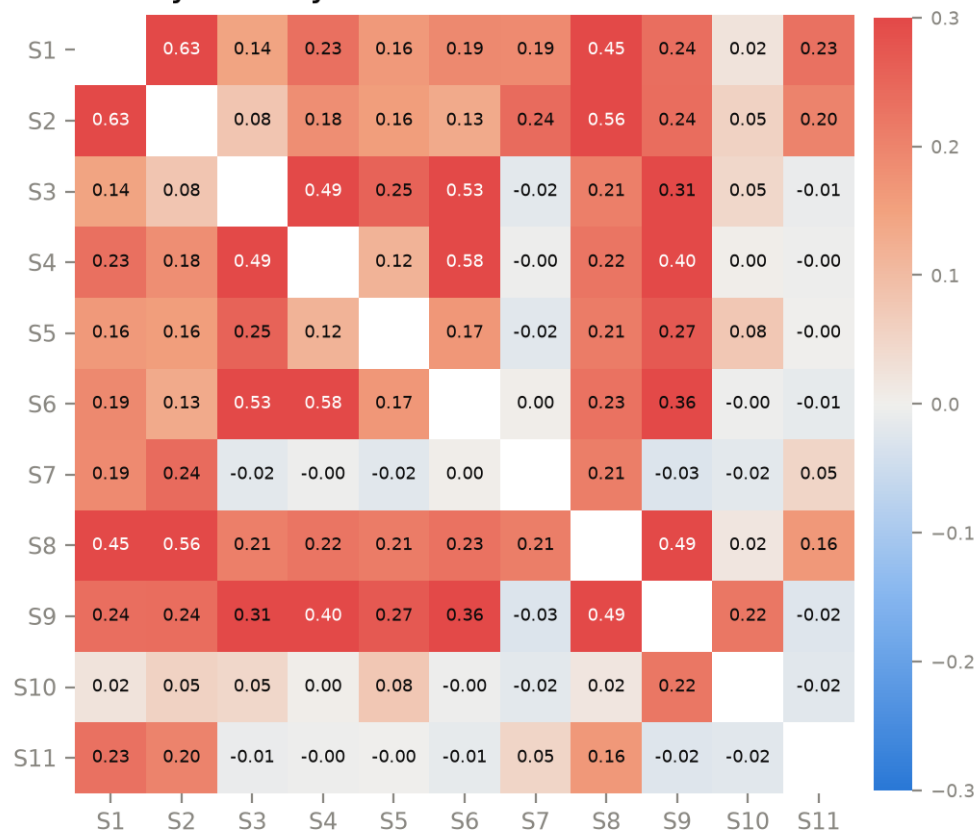

6. Drawdown correlation

Correlation of each pair's daily underwater curves (R below its own peak). Low or negative values mean the strategies are rarely in drawdown at the same time.

Daily P&L correlation and its stability

Primary set: daily P&L correlation

Stability: average pairwise daily-P&L correlation, rolling 6 months

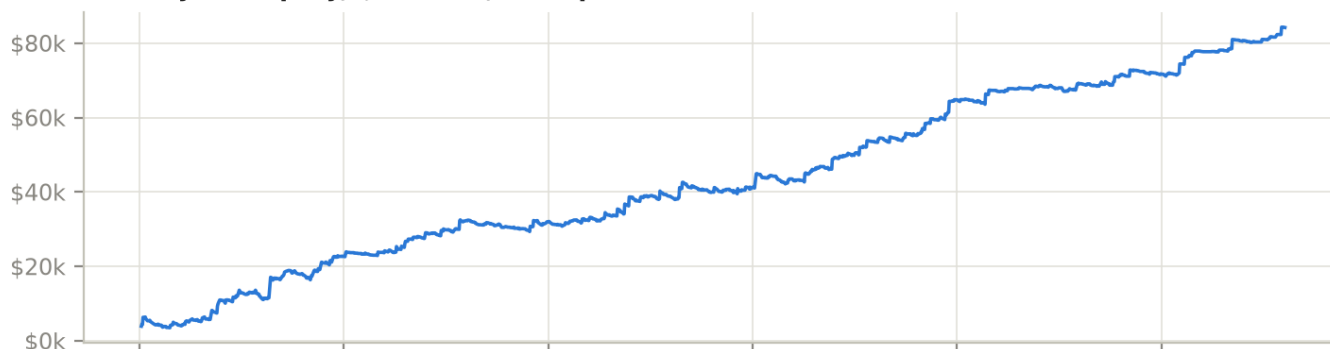

7. The combined account

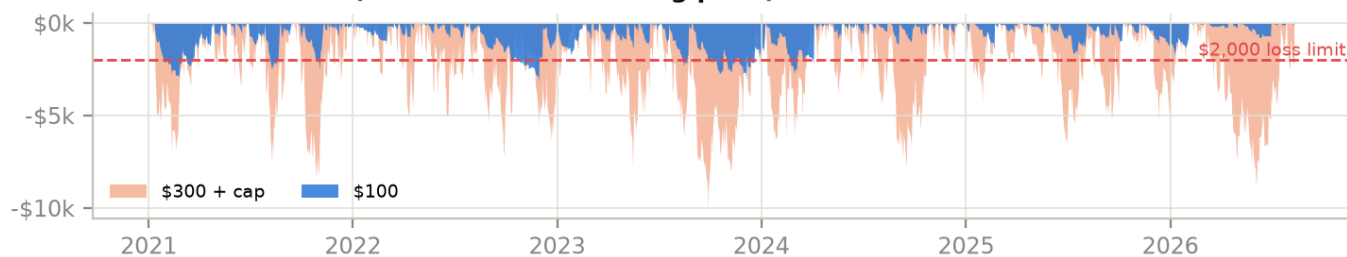

Primary set equity, \$300 risk, \$1,250 daily cap (evaluation mode)

Primary set equity, \$100 risk, no cap (funded mode)

Underwater curve (USD below the running peak)

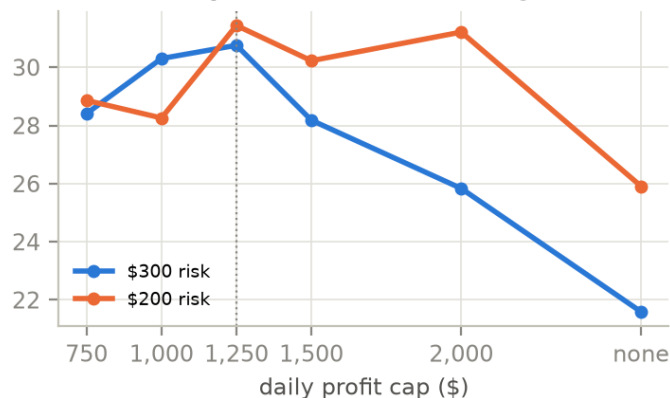

Primary set, monthly result in R (1R per strategy per trade). Blue = gain, red = loss

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
2021	+50	+12	+13	+13	+81	+26	-7	+42	+9	-17	+50	+37
2022	+47	+30	+40	+73	+19	+13	+46	-13	-4	+15	-1	+20
2023	+6	-0	+5	+11	+64	+5	-4	+46	-25	+1	-2	+19
2024	+34	-30	+15	+45	+18	+7	+45	-1	+23	+29	+32	+85
2025	-24	+75	+6	+27	+19	-26	-2	+12	-1	+53	+33	-3
2026	-6	+80	+18	-21	+28	+37	-2	+47				

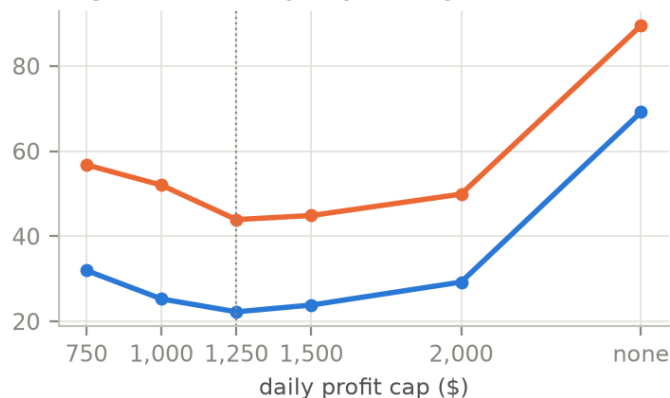

8. The daily profit cap: beating the consistency rule

Under a 50% consistency rule a \$2,000 day raises the profit needed from \$3,000 to \$4,000, so big days slow the pass. Closing everything once the day reaches +\$1,250 keeps every day under 50% of the \$3,000 target, so three normal good days pass. The cost is cutting off the occasional very large day, which is where these strategies earn most; that is worth it during an evaluation but not afterwards.

Lucid Flex pass rate (%), 75% edge

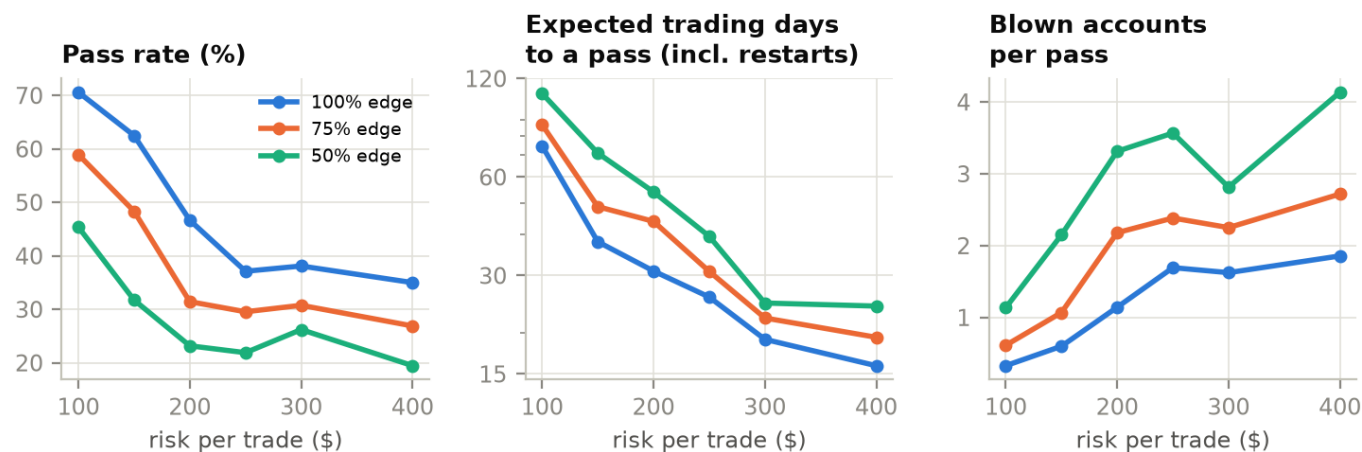

Expected trading days to a pass

Rule tested (primary set, \$300, 75% edge)	Pass	Blown per pass	Expected days
Close all at +\$750	28%	2.5	32
Close all at +\$1,000	30%	2.3	25
Close all at +\$1,250	31%	2.3	22
Close all at +\$1,500	28%	2.5	24
Close all at +\$2,000	26%	2.9	29
No cap	22%	3.6	69

- **Stopping new trades at the cap but letting open trades run did not help:** the open runners overshoot anyway.
- **A cap that grows with accumulated profit** was no better than a fixed \$1,250.
- **A daily loss stop** (\$800 or \$1,200) changed almost nothing, because the drawdown only trails at the end of the day.

9. Risk per trade and firm choice

Lucid Flex evaluation with the \$1,250 cap, primary set

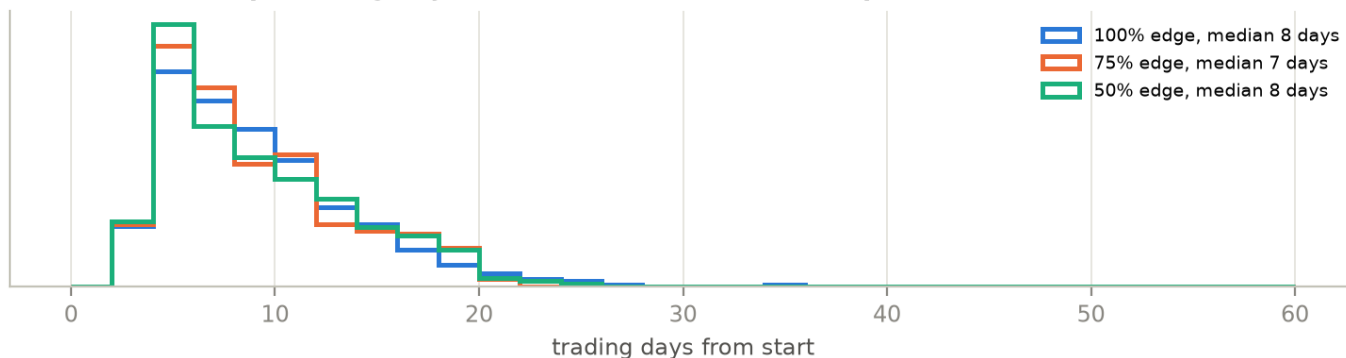

Risk / trade	Pass (100 / 75 / 50%)	Blown per pass	Median days	Expected days incl. restarts
\$100	71% / 59% / 45%	0.3 / 0.6 / 1.1	45 / 47 / 49	75 / 87 / 108
\$150	62% / 48% / 32%	0.6 / 1.1 / 2.2	21 / 21 / 20	38 / 49 / 71
\$200	47% / 31% / 23%	1.1 / 2.2 / 3.3	14 / 12 / 12	31 / 44 / 54
\$250	37% / 30% / 22%	1.7 / 2.4 / 3.6	9 / 9 / 9	26 / 31 / 40
\$300	38% / 31% / 26%	1.6 / 2.3 / 2.8	8 / 7 / 8	19 / 22 / 25
\$400	35% / 27% / 19%	1.9 / 2.7 / 4.1	6 / 6 / 5	16 / 19 / 24

Firm comparison (each cell: pass rate / blown per pass / expected days)

Firm / rule (75% edge)	\$150 risk	\$200 risk	\$300 risk
Lucid Flex + \$1,250 cap	48% / 1.1 / 49d	31% / 2.2 / 44d	31% / 2.3 / 22d
Lucid Flex, no cap	37% / 1.5 / 102d	26% / 2.8 / 90d	22% / 3.6 / 69d
Lucid Pro	49% / 1.0 / 43d	36% / 1.8 / 30d	35% / 1.9 / 16d
Tradeify Select + \$1,250 cap	46% / 1.2 / 61d	29% / 2.5 / 52d	28% / 2.6 / 28d

Lucid Pro is simulated with its \$1,200 daily loss limit and no cap (it has no consistency rule).

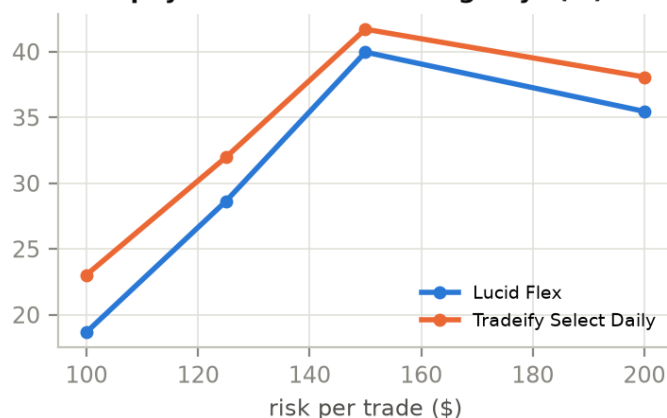

\$300 + \$1,250 cap: trading days needed, in evaluations that passed

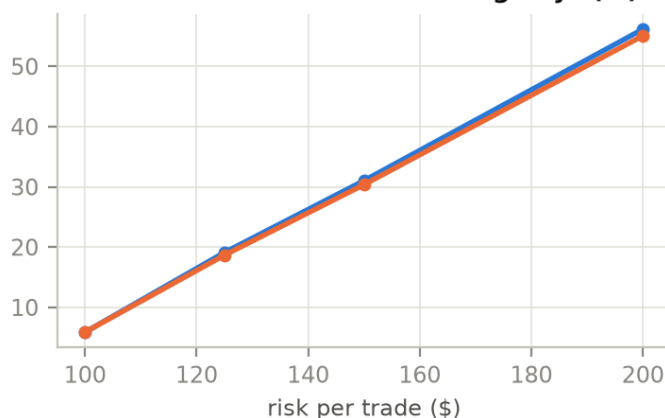

10. Funded account: first payout within a month

Lucid Flex needs five days of at least \$150 profit before the first payout. At low risk most months never produce five such days; above about \$150 the account blows up faster than it pays. No daily cap in the funded account (there is no consistency rule).

First payout within 21 trading days (%)

Account blown within 21 trading days (%)

Firm	Risk	Payout within 21 days (100 / 75 / 50%)	Blown within 21 days	Median payout	Survive 2 months after
Lucid Flex	\$100	24% / 19% / 15%	4% / 6% / 9%	\$1,047	61%
Lucid Flex	\$125	38% / 29% / 22%	11% / 19% / 31%	\$1,205	58%
Lucid Flex	\$150	49% / 40% / 31%	22% / 31% / 42%	\$1,384	48%
Lucid Flex	\$200	45% / 35% / 28%	44% / 56% / 65%	\$1,950	47%
Tradeify Select Daily	\$100	28% / 23% / 19%	4% / 6% / 9%	\$725	88%
Tradeify Select Daily	\$125	37% / 32% / 26%	11% / 19% / 30%	\$825	74%
Tradeify Select Daily	\$150	49% / 42% / 34%	22% / 30% / 41%	\$930	69%
Tradeify Select Daily	\$200	47% / 38% / 33%	44% / 55% / 62%	\$1,000	55%

Funded simulation uses closed trades (the evaluation analysis showed open-trade marking changes little). After the payout the floor sits at start + \$100. Median payout and survival at 75% edge.

11. Alternative set (for \$200 risk)

The combination search was re-run under the new rules (Lucid Flex, \$1,250 cap, 40-micro limit, open-trade marking, 75% edge), ranking sets by expected trading days to a pass on both 2021-22 and 2023-26 start dates. To check for overfitting, the search was also run on 2021-22 only and the winner tested on 2023-26.

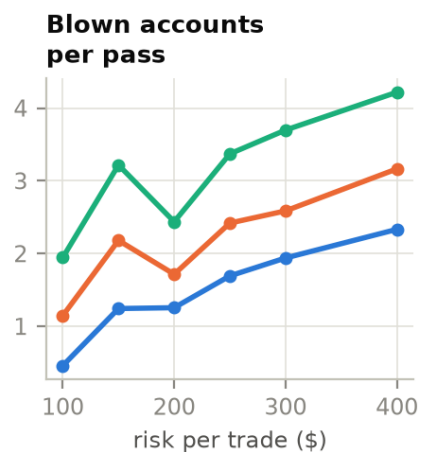

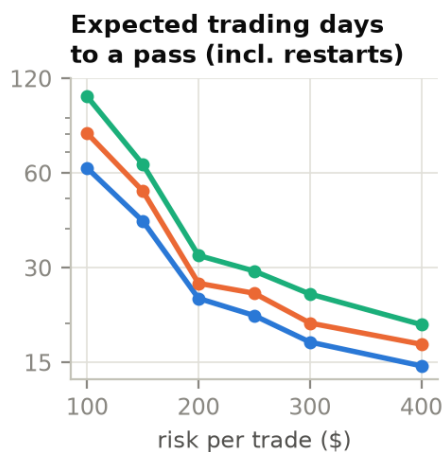

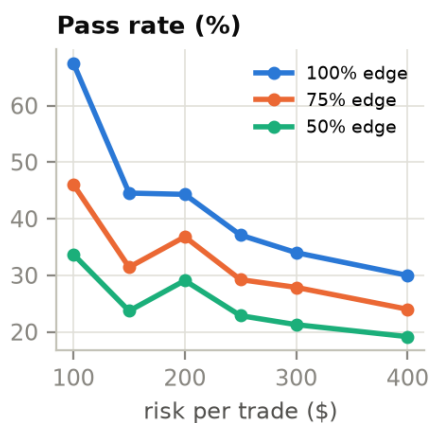

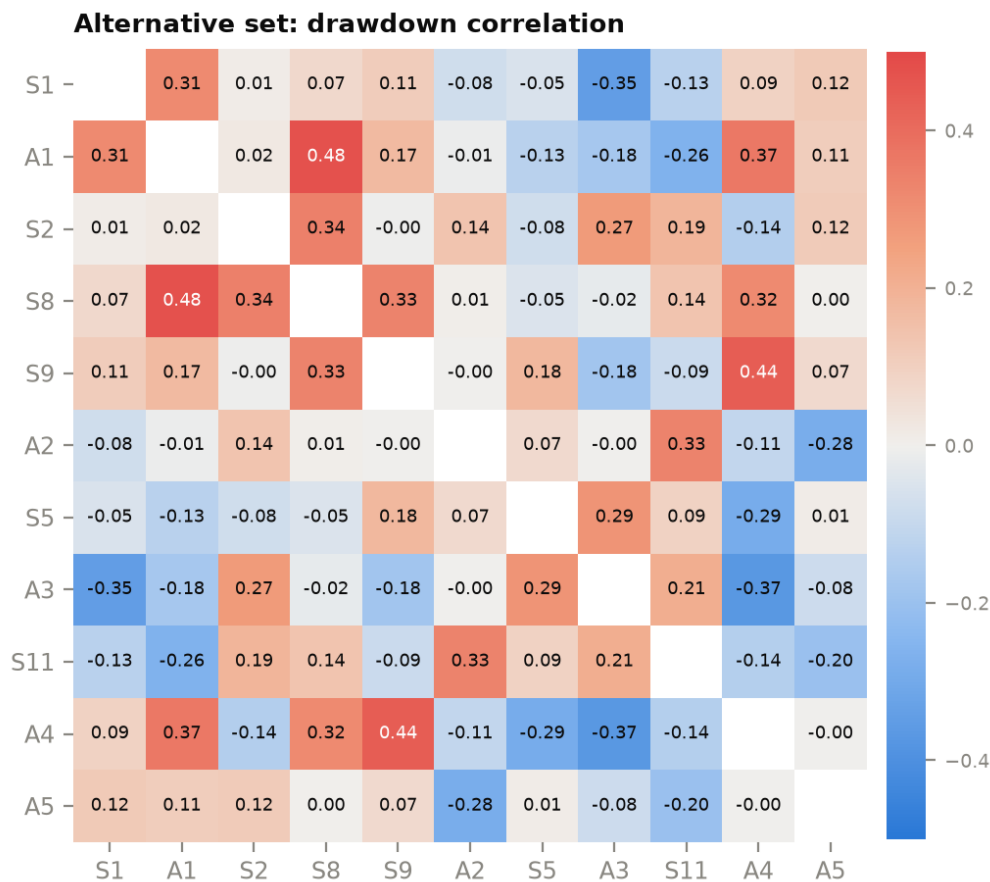

- **At \$300 the primary set is already near the best** (22 expected days). Sets optimised on 2021-22 did no better on 2023-26 (20-24 vs 22 days), so there is nothing reliable to gain.
- **At \$200 a different set is genuinely better.** The primary set slows to 44 expected days there (57 on 2023-26 starts), while sets optimised on 2021-22 alone held up on 2023-26 (26-32 days). The most frequent winner is below.

	Strategy	Dir.	Source	In primary?
S1	H41 Variance-ratio trend momentum	Long & short	V3: Supported / Supported	yes
A1	V2 15-min momentum, 3-ATR trail	Long & short	V2: no clean test yet	no
S2	H20 Extreme-move path	Long & short	V3: Supported / Failed	yes
S8	V2 30-min momentum, 1.5R trail	Long & short	V2: no clean test yet	yes
S9	V2 Mean deviation (60-min SMA)	Long	V2: no clean test yet	yes
A2	H06 Compression to expansion	Long & short	V3: Failed / Supported	no

Avg / max drawdown correlation	0.05 / 0.34	0.05 / 0.34	0.04 / 0.48	0.04 / 0.48
Avg daily P&L correlation	0.18	0.18	0.22	0.22

Weaker evidence: 5 of its 11 strategies are V2 (no clean out-of-sample test) and A2 (H06 compression, long & short) failed V3's 2023-25 holdout at fixed contracts. It is also more correlated day to day. Use it only if you want the \$200 risk level; otherwise stay with the primary set.

Alternative set: drawdown correlation and risk curves

Alternative-only strategies

A1 - V2 15-min momentum, 3-ATR trail (Long & short; C1cf9dd8f45bc741e)

Entry	BUY when the close is $\geq 2.0 \times \text{ATR}_{60} \times \sqrt{15}$ above the close 15 minutes earlier (first bar). SELL SHORT on the mirror image.
Stop	1 x ATR(14) of 15-minute bars.
Exit	Trailing stop 3 ATR behind the best price from the start; flat at 16:00.

A2 - H06 Compression to expansion (Long & short; C2839e22b29c0cb17)

Entry	BUY when the close breaks the previous 60-bar high after 60 bars with realised vol $\leq 0.6 \times$ normal and a 5-minute move ≥ 1.0 sigma. SELL SHORT on the mirror image.
Stop	1 x ATR(14) of 15-minute bars.
Exit	No target; hold to 16:00.

A3 - H07 Opening drive (Short; C18117db2aa81a2bf)

Entry	SELL SHORT at 10:00 when price is $\geq 0.3 D$ below the RTH open and path efficiency since the open ≥ 0.4 .
Stop	1 x ATR(14) of 15-minute bars.
Exit	Single target at +2R; flat at 16:00.

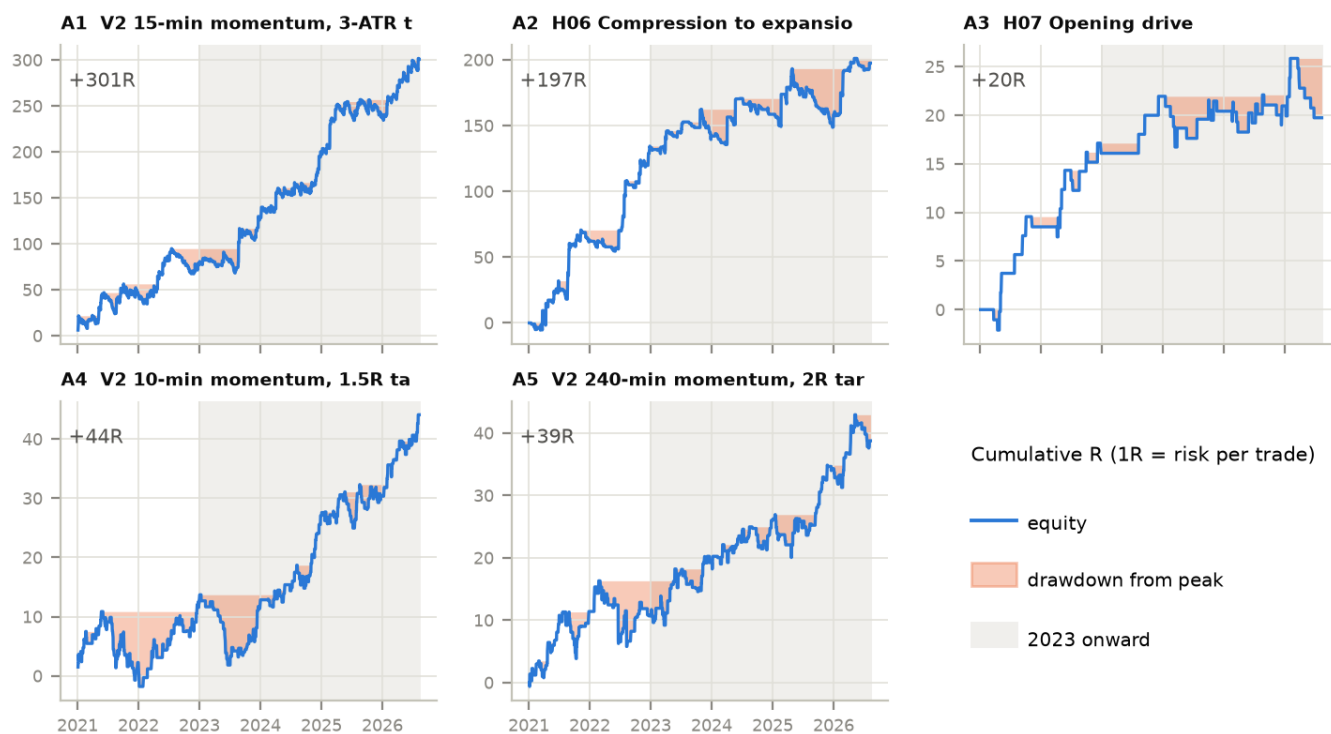

A4 - V2 10-min momentum, 1.5R target (Long & short; C21fa22c47ad5c1cd)

Entry	BUY when the close is $\geq 3.0 \times \text{ATR}_{60} \times \sqrt{10}$ above the close 10 minutes earlier (first bar). SELL SHORT on the mirror image.
Stop	1 tick beyond the last confirmed 5-minute swing low/high.
Exit	Single target at +1.5R; flat at 16:00.

A5 - V2 240-min momentum, 2R target (Long; C3dc5dc6a88e523c7)

Entry	BUY (09:30-12:00 only) when the close is $\geq 1.0 \times \text{ATR}_{60} \times \sqrt{240}$ above the close 240 minutes earlier (first bar).
Stop	1 tick beyond the last confirmed 5-minute swing low.
Exit	Single target at +2R; flat at 16:00.

12. Operating plan

Before buying an evaluation

- Automate all 11 on one platform (e.g. NinjaTrader), one instance per strategy, one account, MNQ orders, NQ bars (plus ES for S7).
- Each instance manages its own position and stop/target orders; no account-level brackets and no manual 'flatten all' while running.
- Set up the daily profit cap as an automatic rule: when the account's day P&L (closed + open) reaches +\$1,250, flatten everything AND disable all 11 strategies until the next session, so they do not keep trading a flat account.
- Enforce the 40-micro limit: the platform must reject or reduce orders that would take total open MNQ above 40.
- Run two weeks on a demo account and compare every fill with the rules, including long/short netting.

During the evaluation

- \$300 per trade (or \$150 for a steadier run), 12 MNQ per trade maximum, \$1,250 daily cap, all strategies on. Budget about 3 evaluations per pass at \$300.
- Do not switch strategies off after losses or change risk mid-evaluation; the simulation assumes none of that.
- Several evaluations at once only as identical copies, never with opposite positions across accounts.

Funded

- Remove the daily cap. Risk \$150 per trade until the first payout (five days of \$150+), take the payout, then drop to \$100.
- Log every trade by strategy code. After 30+ trades, retire any strategy whose average R is far below half its backtest value; review monthly, never after a single bad day.
- If the whole portfolio runs clearly below the 50% case, stop and re-examine instead of raising risk.

Appendix: all 31 candidates

At \$200 risk per trade, MNQ, 2021-01 to 2026-08, no cap. 'Pool' = passed the quality filter used for the combination search.
