DUAL-AUDIT SUPPORTED

0

RESEARCH PATH

2010-2018

Development discovery

32,423 pass five economic gates

2019-2022

Frozen validation

4 supported after Holm over 32,423

2023-2025

Historical audit 1

0 of 4 statistically supported

2026 to Aug 10

Historical audit 2

2 of 4 supported; same frozen cohort

DECISION

STOPPED: no candidate met the preregistered dual-audit rule.

All four produced positive net R in both historical audits, but positive return alone does not equal statistical support. Audit 1 supported none; Audit 2 supported two.

SCOPE AND INTERPRETATION

- The original V5 tested 60 Stage A rules, qualified zero, and remains frozen separately.
- V5.4 widened the predefined engineering search; every discovery qualifier entered validation.
- These are retrospective periods. LIVE_FORWARD was not opened; no live performance is claimed.
- Net R is stop-distance-normalized return after modeled costs, not account dollars.

Frozen candidate 1 of 4

Q54-4b3a94d211d0d426fe3e7c15

EXACT FROZEN SPECIFICATION

0ec535a5... Q54-0ec535a5e60ebe848bd47456	E09 / T3 session	+97.7 R PF 1.74	+28.6 R inc.	+16.0 R sup.

DEPENDENCE AND RISK-BUDGET DIAGNOSTICS

Validation daily net-R correlation: range 0.639 to 0.988.

E09 pair: 0.988; E03 pair: 0.931. Four supported signals do not imply four independent bets.

No exact validation entry/exit trade fingerprint duplicates; there was no preregistered portfolio.

MODELED INTEGER-MNQ COVERAGE

All four had at least one executable discovery trade at each \$250 / \$300 / \$350 / \$400 budget.

E03 variants: 1,129 and 1,139 trades; E09 variants: 640 each, at each of those budgets.

Interpretation limit

The \$1 MNQ round-trip commission is explicitly unvalidated in the cost file. Budget coverage, profit factors and equity curves are model outputs. No real-firm deployability or portfolio profit is established.

How to read the numbers

Definitions, source artifacts, and limitations

DEFINITIONS

Net R	Sum of per-trade net returns after modeled baseline friction, normalized by each trade's entry stop distance.
Profit factor	Frozen engine's gross positive net R divided by absolute gross negative net R; 1.00 is break-even.
Expectancy R	Net R divided by executed trades. A descriptive trade average, not an inference result.
Max DD R	Frozen engine's peak-to-trough trade-level cumulative R drawdown within that period.
Sharpe	Derived here: mean daily net R / sample SD daily net R x sqrt(252), with zero-trade sessions and zero risk-free R.
Trades/week	Executed trades / elapsed calendar weeks, using the explicit start and end dates of each phase.
Equity curve	Cumulative baseline net R, reset to zero at each period. Discovery uses trade order; validation/audits use session order.
Holm p	One-sided daily HAC lag-20 p-value adjusted over 32,423 tests in validation and 4 in each historical audit.

PERIOD BOUNDARIES

Discovery 2010-06-08 to 2018-12-31 Validation 2019-01-02 to 2022-12-30
Audit 1 2023-01-03 to 2025-12-31 Audit 2 2026-01-02 to 2026-08-10

EVIDENCE AND LIMITS

- Exact specs and cohort: V5_4_SCIENTIFIC_COHORT_FREEZE.json (tag v5.4-validation).
- Discovery details: reports/v54/qualifier_details.jsonl (pinned by discovery freeze).
- Validation and audits: reports/V5_4_VALIDATION_RESULTS.jsonl and reports/v54/phase*_sealed.jsonl.
- All source hashes and the final report are pinned by the V5.4 freeze chain through tag v5.4-complete.
- Individual validation/audit trade P&L and dated session labels were not retained; win rate and exact calendar-dated curves are unavailable without a new read.
- No new partition was opened for this PDF. LIVE_FORWARD stays sealed; historical periods are retrospective.

Decision: zero dual-audit supported candidates. The four were frozen after validation and all were carried unchanged through both historical audits. This report is descriptive and does not revise the study's stopping decision.
